

Product Requirements Document (PRD)

Game Analytics Performance Dashboard

Version: 1.0

Status: Draft

1. Overview

Purpose

Build a web-based analytics dashboard that automatically imports weekly game analytics data from CSV files, stores historical records, and provides performance reports and build comparison tools.

The goal is to eliminate manual Excel analysis and enable quick decision-making based on KPIs.

2. Problem Statement

Currently,

- KPI analysis is done manually.
- Every week requires copying data into spreadsheets.
- Historical trends are difficult to compare.
- Comparing Build A vs Build B requires manual calculations.
- No centralized database exists for historical game performance.

This tool will automate the complete process.

3. Objectives

The system should

- Import CSV analytics files
- Automatically parse data
- Save historical data
- Generate weekly reports
- Compare builds
- Visualize KPI trends
- Allow multiple games

4. Target Users

- UA Manager
- Game Producer
- Game Designer
- Studio Founder
- Monetization Manager

5. Main Modules

Module 1

Weekly Performance Reports

Upload weekly CSV files.

Output:

- Weekly Summary
- KPI trends
- Performance score
- Historical comparison

Module 2

Build Comparison (A/B)

Compare any two builds.

Example

Build 2.1

vs

Build 2.2

The system automatically highlights improvements and regressions.

Module 3

Historical Database

Every upload becomes a permanent record.

No duplicate uploads allowed.

6. CSV Import

User uploads

- Retention.csv
- Playtime.csv
- Funnel.csv
- DAU.csv
- Ad Revenue.csv

System validates

- ✓ correct columns
- ✓ correct game

✓ build version

✓ week

After validation

Store into database.

15. Success Metrics

- Upload and process weekly reports in under 30 seconds.
- Reduce manual reporting time by at least 90%.
- Maintain a complete historical KPI database for every game and build.
- Enable one-click comparisons between any two builds or any two weeks.
- Surface significant KPI regressions (e.g., D1, Playtime, ANR) automatically with alerts.
- Support multiple games and platforms from a single dashboard.
